I am breastfeeding my baby

I am worried the COVID-19 vaccine might harm me and my baby. What are the side effects of COVID vaccine?

- Are there any effects of vaccine on other health conditions such as high blood pressure or diabetes?
  - No. If you have high blood pressure or diabetes, you are at higher risk of severe COVID-19 disease and should get the COVID vaccine under medical supervision. The COVID vaccine will not cause other medical health conditions.

- Are there any effects of vaccine on breastmilk production?
  - No. The COVID-19 vaccine does not affect breastmilk production.

- Are there any effects of vaccine on fertility?
  - None of the available vaccines affects fertility for men or women, as all vaccines and their parts are thoroughly tested and tried. Vaccines are authorized for use only after their safety and efficacy is assured.

- Can COVID vaccine cause any allergies, skin or breathing problems?
  - Allergies, skin or breathing problems from the COVID vaccine are very rare. You should be supervised for 30 minutes after vaccination at the vaccine site.
